

NANO REEF DUO is an improved version of the existing NANO REEF set. The lighting unit has been improved to boost the growth of corals and to enhance the natural colours of invertebrates and small sea fish. In addition, we have made the tank larger, maintaining the ideal proportions (35x35x40 cm). The set has been equipped with the high-capacity VERSAMAX 3 filter that additionally functions as a circulator.

The NANO REEF DUO set is an excellent choice for keeping corals, shrimp, small echinoderms, and small marine fish. Maintenance is very simple and does not require a lot of work. Besides regular cleaning, one should change about 10 litres of water per week. The solution is ideal both for experienced fish keepers and for novices, who, thanks to NANO REEF DUO, will be able to set up their first marine aquarium.

VERSAMAX 3

- high filtration capacity – 1200 l/h
- filter media included
- does not take up space in the tank
- continuous performance adjustment
- easy access to filter media
- easy to clean
- large filtration surface

LEDDY SLIM DUO

Designed especially for marine aquariums, the lamp contains two rows of LEDs with a total power of 10 W (2x5 W).

The **MARINE** LEDs emit a strong white light that provides excellent conditions for the growth of corals. The **ACTINIC** LEDs emit a blue actinic light that enhances the colours of marine animals.

COVER GLASS

The cover glass is equipped with the Smart Open system and has a special cut-out for installing an external filter. Ensures safe and comfortable operation on a day-to-day basis.

AQUARIUM TANK

Carefully produced of 5mm-thick glass, the tank is ideally proportioned (35x35x40 cm, 49 litres). It is glued together with transparent silicone, which gives it an exquisitely modern look.

PROTECTIVE MAT

Made of special foam, the mat provides additional safety of operation and ensures thermal insulation of the tank bottom.
