# The little mould film killer: EHEIM skim350

**new**

**EHEIM skim350 – the micro- surface skimmer for smaller aquariums up to 350 l. Simple, quick and flexible to use. Ready to use immediately.**

In almost any aquarium a film of micro-organisms, dust, oils and food fats – forms over time.

With the EHEIM skim350 surface skimmer, you can efficiently eliminate this mould film and have a glass clear water surface and high oxygenation. The EHEIM skim350, although designed for constant use is also suitable for short term use. If using alternately in several aquariums, please make sure that algae spores or diseases are not transmitted from one to the other. The bacteria and dirt particles which are sucked in are collected in the filter sponge. This should be simply taken out and thoroughly cleaned after each use.

## EHEIM skim350

**Smaller surface skimmer for aquariums up to 350 l.**

- Removes films and microorganisms from the water surface
- Promotes proper gas exchange
- For both long term and temporary usage
- Quick installation - easy to fix to the pane via suction cups
- Only 5 Watt power consumption

# The new Mini-Internal filter

# EHEIM

## EHEIM miniUP

Mini-Internal filter for Nano Aquariums 25 to 30 l

It's small, gives excellent performance and is simple to fix to the tank with suction cups. The filter sucks the water in through vents, carries it through the filter sponge and directs it further up, cleaned, back into the tank. You can also connect an outlet hose in order to adjust the outflow direction.

- Unobtrusive, slim design
- Front water intake
- Connection for water outlet hose
- Completely equipped with original EHEIM filter pad, ready to use
- Only 5 Watt power consumption

*Adjustable filter output*

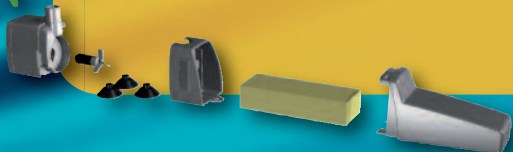

## EHEIM miniFLAT

**Micro internal filter for terrariums and paludariums with shallow water area or water bowls** (e.g. for frogs, semi-aquatic reptiles, cray fish etc.)

This unique little flat water filter is designed differently to an internal aquarium filter: It doesn't hang on to anything, but rather lies horizontally in the water. It is fixed with suction cups to the bottom of the tank. Here it draws the water in from below, pumps it through the filter sponge and directs it out filtered at the top. The surface water movement makes the drinking water for reptiles visible. If you want to adjust the outflow direction, you can attach an outflow hose.

- Water intake from below
- Connection for water outlet hose
- Completely equipped with original EHEIM filter pad & ready to use
- Only 5 Watt power consumption
